Raffle Winner Automation

Background

A merchant is running a raffle. **100 customers** will be marked as winners by adding a Shopify customer tag: **rafflewinner**. Winners are selected in **3 separate stages**, so tags will be applied gradually (not all at once).

When a customer becomes a winner, the merchant wants:

1. **A 10% discount applied to all of that customer's Recharge subscriptions**, and
2. **An automatic email sent** from Shopify to a staff member, letting them know the discount has been applied to a specific customer who is referenced in the email.

This needs to be **inferable from public docs** (Recharge + Shopify Flow), and described at a high level (no coding required, but technical correctness matters).

Task

Prepare a short solution proposal that answers the following.

- 1) Establish the scope by asking the merchant additional questions on any of the points mentioned above.
- 2) Propose the solution and provide a high-level flow diagram - what happens, where, and what the next step is.

Additional Info

You can use any publicly available info on Shopify and Recharge, including developer documentation. As a starting point, look into the Shopify Flow application to facilitate the resolution of the task.

For the flow diagram, you can use draw.io.

To familiarize yourself with Shopify, Shopify Flow, and other apps, feel free to create a free Shopify Partners account and then use the Partner Dashboard to provision the new dev store.
